Signature of Property Owner:

Architectural Review and Construction Committee Approval

Date _____

() Approved () Disapproved* (Deficiencies explained below)

Signatures _____

***Notes**

- (1) All steel buildings have historically been used in this subdivision for storage or other outbuildings and many currently exist. However, metal buildings are not always allowed and will be approved subject to the following conditions.
 - a. Metal buildings, roof and siding, will not be approved as a residential structure.
 - b. Metal outbuildings will not be approved as a sole project unless the residential structure is already in place and fully constructed as previously proposed and approved.
 - c. Metal outbuildings are OK as part of a larger proposal to build a residential structure. Approval of the metal building is conditioned on a clear format commitment (all permits and contract in place) to fully construct the residence as proposed within a reasonable time frame (12 months.)
- (2) Frame and/or masonry materials are typically used for residential structures but outbuildings constructed with these materials have the same restrictions as metal outbuildings.
 - a. Outbuildings will not be approved as a residential structure.
 - b. Outbuildings will not be approved as a sole project unless the residential structure is already in place and fully constructed as previously proposed and approved.
 - c. Outbuildings are OK as part of a larger proposal to build a residential structure. Approval of the metal building is conditioned on a clear format commitment (all permits and contract in place) to fully construct the residence as proposed within a reasonable time frame (12 months.)
- (3) A proposed new residential structure intended solely for the purpose of operating a short-term rental (less than 3 months) and not as a primary or secondary residence will not be approved since this violates the deed restrictions prohibiting use of the property for business or commercial purposes.
